

Features

- Serrated head with magnetic core ensures fixed position of the the shank
 - The setting head is simply connected to the shank without screws
 - The bubble level indicates the tool position and easily enables adjustment of the boring bar to the center.
 - Significant time saving can be achieved by using this unique setting head
- High setting accuracy can be easily attained and ensure excellent performance of the **WHISPERLINE** boring bars
 - During tool assembly and positioning process on the machine please pay attention to the angle position selector. It must be set to the angle that is defined for each head - while for most of the ISO turning heads the angle is 0°, the **CUT-GRIP** heads need to be set to 15° or 30°.
